PROFESSIONAL SUMMARY

AWS Certified-style DevOps Engineer and Infrastructure Professional with expertise in CI/CD automation, Kubernetes orchestration, Docker containerization, Terraform Infrastructure as Code (IaC), Linux Administration, Cloud Infrastructure, and Production Support. Experienced in deploying scalable cloud-native applications on AWS and Azure environments. Strong hands-on expertise in Jenkins, Ansible, Monitoring, Cloud Security, Release Engineering, Automation Scripting, and High Availability Infrastructure. Proven ability to improve deployment efficiency, automate operational workflows, and optimize cloud resources.

TECHNICAL SKILLS

Cloud Platforms	AWS, Azure, GCP
AWS Services	EC2, S3, RDS, IAM, Lambda, VPC, CloudWatch, Route53, SNS, SQS
DevOps Tools	Docker, Kubernetes, Jenkins, Terraform, Ansible, Chef, Puppet
Programming	Python, SQL, Bash, PowerShell, JavaScript
Monitoring	Prometheus, Grafana, ELK Stack, Zabbix, CloudWatch
Operating Systems	Linux (RHEL, Ubuntu, CentOS), Windows Server
Version Control	Git, GitHub, SVN
Virtualization	VMware ESXi, Hyper-V, vCenter

PROFESSIONAL EXPERIENCE

IT Programmer | Data Center Network Engineer | RITES Ltd, Gurugram (Jan 2025 – Oct 2025)

- Managed Linux and Windows production servers supporting 200+ enterprise workloads with 99.9% uptime.
- Built CI/CD pipelines using Jenkins, GitHub, and Docker reducing deployment time by 60%.
- Automated AWS infrastructure provisioning using Terraform and CloudFormation decreasing setup effort by 70%.
- Deployed Docker containers and Kubernetes workloads for scalable microservices architecture.
- Administered VMware ESXi and Hyper-V virtualization environments hosting 100+ virtual machines.
- Configured AWS services including EC2, S3, IAM, Lambda, Route53, CloudWatch, and RDS.
- Implemented monitoring dashboards using Grafana, Prometheus, and ELK Stack improving incident visibility by 40%.
- Automated server administration tasks using Python, Bash, and PowerShell scripting.
- Managed SAN/NAS storage systems improving backup and recovery reliability by 35%.
- Maintained high availability production infrastructure and coordinated disaster recovery operations.

Automation Enablement | AuthBridge, Gurugram (Oct 2024 – Dec 2024)

- Developed SQL-based automation workflows processing 50K+ operational records daily.
- Automated reporting and analytics tasks reducing manual effort by 45%.
- Performed ETL operations, data cleaning, validation, and reporting using SQL, Python, and Excel.
- Built analytical dashboards improving operational reporting accuracy by 30%.

DEVOPS PROJECTS

CI/CD Pipeline Automation using Jenkins & Docker

- Designed automated CI/CD pipelines for Java and Python applications using Jenkins and GitHub.

- Integrated Docker-based build environments reducing deployment failures by 50%.
- Reduced release cycle time from 3 hours to 45 minutes.
- Implemented automated testing and deployment workflows across Linux environments.
- Improved deployment consistency and rollback efficiency across multiple environments.
- Optimized build automation and release management operations.

Kubernetes-Based Microservices Deployment

- Containerized enterprise applications using Docker and deployed workloads on Kubernetes clusters.
- Configured Helm charts for scalable Kubernetes deployments.
- Implemented auto-scaling and load balancing improving application availability by 35%.
- Reduced infrastructure resource utilization by 25% through optimized container orchestration.
- Monitored workloads using Prometheus and Grafana dashboards.
- Enhanced application fault tolerance and deployment reliability.

AWS Infrastructure Automation using Terraform

- Provisioned AWS infrastructure including EC2, VPC, IAM, S3, and RDS using Terraform.
- Created reusable Infrastructure as Code modules reducing setup time by 70%.
- Configured secure networking, security groups, and cloud access management.
- Automated environment provisioning for development and production teams.
- Improved infrastructure scalability and consistency.
- Reduced manual cloud deployment errors through automation.

Monitoring & Logging Platform Implementation

- Implemented centralized monitoring using ELK Stack, Prometheus, Grafana, and CloudWatch.
- Configured automated alerts reducing incident response time by 40%.
- Built real-time dashboards for infrastructure and application monitoring.
- Integrated cloud-native monitoring with AWS services.
- Improved troubleshooting efficiency using centralized log analytics.
- Enabled proactive monitoring and operational visibility.

Linux Server Monitoring & Automation

- Developed Linux monitoring scripts using Python and Bash.
- Tracked CPU, memory, disk utilization, and application uptime metrics.
- Configured cron-based monitoring automation reducing downtime incidents by 30%.
- Generated analytics reports for server performance optimization.
- Implemented automated alert notifications for critical services.
- Improved infrastructure reliability through proactive maintenance.

End-to-End Web Application Deployment on AWS

- Hosted scalable web applications using AWS EC2, S3, RDS, and Route53.
- Configured Load Balancers and auto-scaling for high availability infrastructure.
- Implemented Dockerized deployments improving scalability and portability.
- Integrated cloud storage and database backup strategies.
- Improved application performance and availability by 35%.

- Implemented secure cloud deployment and access control best practices.

CERTIFICATIONS

- Python with Data Science – Udemy
- Machine Learning using Python – Great Learning
- Django – Cipher Schools
- JavaScript – Udemy
- NLP – Coursera

EDUCATION

Lovely Professional University (LPU), Punjab

B.Tech in Computer Science & Engineering | CGPA: 7.2 | 2020 – 2024

RTC High School – 78.6% | 2019

DAV Public School – CGPA 10 | 2017

ADDITIONAL INFORMATION

- Strong expertise in DevOps lifecycle, CI/CD automation, Infrastructure as Code (IaC), and Cloud Engineering.
- Hands-on experience with AWS, Azure, Docker, Kubernetes, Jenkins, Terraform, Linux Administration, and Monitoring Tools.
- Excellent analytical thinking, troubleshooting, collaboration, and production support skills.
- Experience in high availability systems, release management, infrastructure automation, and cloud-native deployments.
